

Nikita Syreishchikov

Senior Frontend Engineer / Frontend Lead

Valencia, Spain | Remote | Available as a self-employed B2B contractor
rtlpip@pm.me | amaryfilo.com | linkedin.com/in/amary-filo | github.com/amaryfilo

Profile

Senior Frontend Engineer / Frontend Lead with 10+ years of experience building frontend-heavy products in fintech, banking, Web3, and complex B2B platforms. My main stack is Angular and TypeScript, and my work usually sits close to product logic: client accounts, banking, onboarding, admin tools, crypto wallets, payment interfaces, and internal operational systems.

I'm strongest in roles where frontend is an important part of the product logic and where I can combine hands-on development with architecture, feature delivery, and team support. I can work from unclear product direction to a first usable version, improve existing systems, and help teams move faster without making the product harder to maintain. Based in Valencia, Spain, open to remote roles and B2B contractor collaboration.

Core Expertise

Angular, TypeScript, Frontend Architecture, Product Delivery, Fintech & Banking Interfaces, Web3 Interfaces, Wallet / Transaction Flows, Admin Panels, Internal Tools, Frontend Modernization, Reusable UI Systems, RxJS, Signals, SSR, REST APIs, Node.js, React.

Experience

Independent Frontend Consultant

Sep 2025 – Present

Self-Employed

Valencia, Spain

Provided independent consulting on frontend architecture and shared UI systems for early-stage Web3 and fintech prototypes. Focused on establishing maintainable project structures, optimizing SSR and performance, and building reusable Angular foundations tailored for transaction-heavy, wallet-connected flows.

Frontend Team Lead

Nov 2023 – Sep 2025

Unlimit

Remote

Led hands-on frontend work for a crypto/fintech platform, covering client-facing banking flows, internal tools, crypto payment interfaces, Angular modernization, shared UI patterns, and team delivery.

- Modernized Angular applications and frontend structure to reduce duplicated logic, improve maintainability, and make feature delivery more predictable.
- Improved internal tools and admin functionality to support maintainability and faster delivery.
- Helped turn unclear product requirements into deliverable frontend scope.
- Built a reusable UI and implementation patterns across product areas to keep interfaces consistent.
- Supported delivery through mentoring, documentation, technical interviews, and team collaboration.

Senior JS/TS Developer

Aug 2022 – Nov 2023

Unlimit

Limassol, Cyprus

Worked on a crypto/fintech platform, building customer-facing features, internal tools, and Angular/TypeScript frontend interfaces.

- Developed frontend functionality for banking and crypto user journeys with transaction-heavy flows.
- Worked on wallet-related flows, internal product areas, account functionality, and scalable UI patterns.
- Collaborated with backend, product, and design teams on APIs, data flows, validation, and releases.
- Contributed to frontend consistency, maintainability, and architecture evolution across the platform.

Frontend Team Lead

Feb 2022 – May 2022

Nodamatics

Remote

Led developing a crypto web platform to improve and simplify frontend structure/architecture and delivery flow on Angular. Improved workflow through planning, code reviews, mentoring, and design collaboration.

Frontend Team Lead

Feb 2021 – Jan 2022

Rock'n'Block

St. Petersburg, Russia

Led the frontend direction with a growing frontend team across Web3 web/mobile products, maintaining a hands-on approach with Angular/React, Ionic, and while overseeing wallet integrations and dApp architecture.

- Spearheaded the frontend team's growth by designing and conducting technical interviews, evaluating candidates, and maturing the hiring process during a period of rapid expansion.
- Established a unified frontend ecosystem by developing shared utilities and a cross-project component library, significantly reducing time-to-market for new Web3 features.
- Drove the full development lifecycle, including technical documentation, CI/CD optimization, and cross-team mentoring to ensure high delivery standards across the organization.

Software Engineer

Dec 2019 – Jan 2022

Rock'n'Block

St. Petersburg, Russia

Delivered web, mobile, and backend-adjacent work for crypto-focused applications, including wallet products, transaction flows, blockchain integrations, and client-facing Web3 interfaces.

- Built crypto wallet interfaces for iOS/Android, and web environments using Angular, Ionic and TypeScript.
- Implemented token and transaction flows: claim, deposit, staking, and wallet-related product features.
- Worked on complex integrations using NFC for signing transactions via physical cards for mobile wallets.
- Worked with Node.js services, REST APIs, wallet integrations, token logic, and supported blockchain-specific integration.
- Contributed to frontend performance, SEO, release support, and implementation with backend and design teams.

Software Engineer

Feb 2019 – Aug 2019

Wallarm

Moscow, Russia

Worked on marketing and web platform initiatives involving CRM integrations (Hubspot), analytics implementation, and frontend delivery for content-driven web experiences. Contributed across frontend delivery and infrastructure-adjacent tasks.

Web Developer

Sep 2016 – Aug 2019

Grand Media Service

St. Petersburg, Russia

Built and launched commercial web projects end-to-end, including e-commerce sites, landing pages, CMS-based platforms, and marketing assets.

- Worked with e-commerce functionality, payment integrations, order flows, and analytics setup.
- Improved site performance through frontend optimization and basic server-side configuration.
- Built a foundation in shipping practical client-facing products with real business requirements.

Education**Peter the Great St. Petersburg Polytechnic University**

Bachelor's Degree, Business Informatics.

College of Information Technology

Technician Programmer, Computer Programming.

Technical Profile

Angular-first frontend engineer with strong TypeScript experience across fintech, Web3, banking, and B2B product flows. I focus on scalable frontend architecture, reusable UI systems, and product foundations for transaction-oriented and wallet-related interfaces. I usually work close to product logic: onboarding, wallets, payments, balances, admin tools, internal operations, and transaction-heavy interfaces.

My frontend approach is practical: feature/domain-based structure, clear state ownership, shared UI patterns, RxJS or Signals where they help, and code that other engineers can support. Angular is my main framework, but I have worked with React in production and can use it when the product and role make sense.

I am also comfortable at the frontend-backend boundary: REST APIs, auth/session flows, token refresh, API contracts, mock servers, Node.js/TypeScript service tasks, and integration debugging. I do not position myself as a backend engineer, but I understand backend constraints and help shape APIs that are convenient for frontend delivery.

Selected Technical Areas

- Angular, TypeScript, JavaScript, React.
- RxJS, Signals, BehaviorSubject, facades, feature/domain-based architecture.
- SSR, performance, maintainability, bundle optimization, standalone components, lazy loading.
- Design systems and reusable UI foundations.
- Web3 product interfaces, wallet flows, smart contract-connected frontend logic.
- REST APIs, API contracts, Node.js, mock servers.
- HTML, CSS, Sass, Git, Ionic.

Demo Highlights

Wallet Tools

amaryfilo.com/demos/wallet-tools

Crypto demo focused on wallet-connected flows, staking, auctions, and token-based marketplace logic.

- Built the Angular frontend and the underlying smart contract logic for staking and auction mechanics.
- Managed full-cycle testing and deployment to Sepolia and Base Sepolia environments.

DEX Tools

amaryfilo.com/demos/dex-tools

Crypto demo covering AMM-style mechanics: swaps, liquidity pools, and yield farming.

- Engineered protocol-facing frontend flows for LP interactions, bridging Angular interfaces with smart contract logic.
- Managed full-cycle testing and deployment to Sepolia and Base Sepolia environments.

Where I Can Add Value

Hands-on frontend leadership focused on architecture, product delivery, and scaling technical teams.

- Turning ambiguous product ideas into first usable versions by defining frontend structure, API contracts, and practical MVP scope.
- Building maintainable Angular ecosystems with domain-based structures and clear state ownership, ensuring the product remains scalable as the team grows.
- Delivering high-stakes interfaces for banking, wallet-connected flows, and internal operational tools where logic density is high.
- Reducing engineering overhead by eliminating duplicated logic, simplifying overly complex patterns, and establishing shared UI foundations.
- Scaling the frontend department by designing technical interview processes, evaluating candidates, and mentoring engineers to maintain high delivery standards.
- Facilitating collaboration between product and engineering through technical documentation, integration debugging, and delivery-oriented decision-making.
