

Nikita Syreishchikov

Senior Frontend Engineer / Frontend Lead

Valencia, Spain | CET/CEST | Available for B2B contract | Remote
connect@amaryfilo.com | amaryfilo.com | linkedin.com/in/amary-filo | github.com/amaryfilo

SUMMARY

Senior Frontend Engineer / Frontend Lead with 10+ years of experience building and modernizing TypeScript and JavaScript products across fintech/banking, Web3, and B2B/enterprise products. Focused on frontend architecture, reusable UI systems, API contracts, BFF layers, complex product flows, performance, and scalable delivery, with hands-on experience across Angular, React, Next.js, and Node.js. Strong at turning unclear requirements and complex integrations into maintainable frontend systems that lower delivery risk, reduce time to market, and make products easier to extend. Delivered 25+ products, launched a B2B KYB/KYC MVP in 3 weeks, reduced manual onboarding by 90%, modernized banking platforms for 1,500+ DAU, and led frontend teams of up to 15 engineers.

SKILLS & LANGUAGES

Skills: TypeScript, JavaScript, Angular, React, Next.js, Node.js, RxJS, Frontend Architecture, Design Systems, Component Systems, State Management, REST APIs, API Integration, Backend-for-Frontend (BFF), Server-Side Rendering (SSR), Performance Optimization, Web Accessibility, Web3 Integration, Team Leadership, Code Review

Tools: CI/CD, GitHub Actions, GitLab CI, Vite, Webpack, ESLint, Prettier, Stylelint, Vitest, Playwright, Sentry, Lighthouse, Figma

Languages: English – Professional Working Proficiency.

PROFESSIONAL EXPERIENCE

Self-Employed

Valencia, Spain / Remote

Independent frontend engineering for fintech, banking, Web3, and enterprise B2B products.

Senior Frontend Engineer / Frontend Architect

September 2025 – Present

- Built a scalable frontend foundation for complex web products with prebuild common modules, reducing repeated setup work by 70% and helping product teams launch projects faster.
- Improved initial page loading by 40% by implementing SSR / prerendering and server-side language detection, making public pages faster and SEO-ready from the first render.
- Created a headless UI system with 25+ components and 16+ business blocks, standardizing forms, tables, dialogs, charts, dashboards, account pages and common product screens.
- Built a transaction-flow layer for multi-step operations with loading, confirmation, error, retry, and progress states while reducing repeated implementation work by 60%.

Unlimit

Valencia, Spain / Remote

Global fintech infrastructure company with 15+ years in the market, serving 50,000+ businesses and 1B+ users with payment processing, financial accounts, BaaS, digital asset rails, and 1,000+ payment methods.

Frontend Team Lead

November 2023 – September 2025

- Built and launched a B2B KYB/KYC onboarding MVP in 3 weeks with company, stakeholder, and verification flows, reducing manual onboarding by around 90% and supporting 300+ corporate clients.
- Built and modernized an internal banking admin tool for client accounts, cards, permissions, and operational actions, removing around 70% of legacy logic and making the product easier to extend.
- Migrated a core banking web platform from Angular 14 to 17 for around 1,500+ DAU, accelerating feature delivery by 40% and reducing frontend complexity by 30%.
- Implemented a BFF approach and frontend documentation, reducing integration issues by around 30% and recurring team questions by around 40%.
- Mentored 5 frontend developers, reviewed architecture decisions, and implemented code review and CI/CD practices, improving code quality and reducing potential issues before release.

Senior Frontend Engineer

August 2022 – November 2023

- Built and launched a non-custodial browser wallet extension from scratch to production in 3 months with 10+ product flows, secure session handling, browser API injection, and cross-instance state synchronization.
- Implemented custom provider APIs and third-party dApp connection logic, enabling MetaMask-like account access, transaction calls, and secure user confirmations through a reusable integration layer.
- Developed token and transaction features for claim, deposit, staking, balance operations, progress tracking, and confirmations, making crypto operations clearer and more predictable for users.
- Created a Smart Wallet POC with Biconomy and ZeroDev, validating account abstraction and gas-sponsored transaction flows while documenting limitations of the legacy core banking frontend for platform modernization.

Nodamatics

Remote

Fintech startup providing proof-of-stake infrastructure and crypto staking solutions for institutional clients.

Frontend Team Lead

February 2022 – April 2022

- Restructured a large Nx monorepo into separate application areas, shared packages, and build boundaries, then migrated the main web application to Angular 14, making the codebase 2x easier to navigate and maintain.
- Integrated generated gRPC clients, custom Ethereum node transaction signing, CI/CD pipelines, and code review checks for a 2-person frontend team, improving backend communication, build validation, and release quality under tight delivery constraints.

Rock'n'Block

Saint-Petersburg, Russia / Hybrid

Web3 development studio founded in 2017, delivering 300+ blockchain projects with 150+ in-house developers and infrastructure used by 70M+ users globally.

Frontend Team Lead

February 2021 – January 2022

- Built the frontend hiring process with interview matrices and evaluation practices, resulting in 11 new hires and expanding the department to 15 engineers.
- Coordinated delivery of multiple Web3 products across Agile/Scrum teams while staying hands-on with architecture, estimation, implementation, and release support.
- Built a framework-agnostic RxJS wallet connection library for MetaMask and WalletConnect, reducing wallet integration setup time by around 50% and reaching 20+ GitHub stars and 190+ weekly downloads as an open-source NPM package.
- Released 7+ production React applications for staking platforms, bridges, and exchange products by reusing wallet logic, shared UI patterns, and product templates.
- Built a frontend delivery system with CI/CD checks, linting, code reviews, mentoring, and onboarding documentation, improving release quality and making new team member onboarding around 2x faster.

Software Engineer

December 2019 – February 2021

- Built and launched 3 Axion ecosystem modules, including dashboard, landing page, and staking/auction product, supporting \$500k+ in token volume and handling 3 major design iterations before release.
- Built the Ducatus wallet ecosystem across 5 product surfaces, including web, iOS, and Android apps, and implemented Cordova NFC signing with Tangem cards, reaching 10k+ mobile downloads.
- Developed and modernized Node.js backends for Quras, Ducatus, and Census by adding wallet functionality, rebasing legacy Copay/BitPay code, creating backend documentation, and supporting production stability.
- Created Ionic build and deployment documentation, making mobile release preparation around 2x faster for other engineers.

Wallarm

Moscow, Russia / Remote

API and AI security company protecting APIs, applications, and AI agents; raised \$55M Series C in 2025 and \$70M+ total funding.

Software Engineer

February 2019 – August 2019

Built localized marketing pages, CMS components, HubSpot lead-generation forms, Google Analytics tracking, and WordPress website for the CIS market, making campaign pages around 2x faster to launch and helping the company prepare for regional expansion.

Grand Media Service

Saint-Petersburg, Russia / On-site

Full-cycle marketing agency operating since 2006, delivering digital marketing, SEO, and commercial web solutions for business clients.

Web Developer

September 2016 – August 2019

Delivered 10+ e-commerce and business websites and maintained 30+ client platforms as the main developer, covering requirements, frontend, CMS setup, payment flows, analytics, deployment, bug fixes, and production support.

PROJECTS

2026: Frontend Platform | Production-ready frontend system for faster launch of complex web products.

- Designed to help product teams start from a production-ready frontend foundation instead of creating core architecture and common product flows from scratch.
- Reduces risks in the early stages of development by providing teams with a ready-made structure and UI/UX before starting work on the product, helping them quickly launch MVPs, customer portals, admin panels, and high-load interfaces.
- Increases product scalability by ensuring isolation of business domains, management of integration logic, and consistent user interface behavior across different areas of the product.

EDUCATION

2019: Bachelor's Degree, Business Informatics | Peter the Great Polytechnic University | Saint-Petersburg, Russia

2016: Technician Programmer, Computer Programming | College of Information Technology | Saint-Petersburg, Russia
